Our People-Centered Digital Future
The Future of The Internet and Humanity in a Digital Era
December 10, 2018

"It is time to make progress defining a way forward towards an increasingly beneficial Internet in anticipation of the billions who will gain access to it as this decade ends."
— Vint Cerf

"Our People-Centered Digital Future," recognizes that by March, 2019, 50% of the world will be connected to the Internet. At the same time, the world also celebrates the 70th Anniversary of the Universal Declaration of Human Rights by the United Nations. December 10th, 2018 marks an important moment for examining the "unfinished work" of the Internet and discussing the community norms, human rights and social contracts required in this exponential digital era.
